Pilot Region AltoMilanese

T.E.A.M. - Tecnocity Energy Area Manager
Before AlpStore: Our Challenges

• The future is no longer what it once was
  a huge evolution, maybe it could be defined as a revolution, is going on in the exploitation of renewable resources for a dispersed energy conversion (mainly in order to generate electricity); this revolution is more and more requiring a change of paradigm in the way we design the infrastructures (grids) and in the way we use energy, thus a technological revolution but with a direct impact on the social sphere.

• Dense Populated & Industrialized Area
  Huge energy needs

• Pollution & Traffic Jam
  ... but e.mobility doesn’t mean just to move the pollution in another area

• Alpine Space do have renewable resources
  Our goal is to effectively exploit such resources
During AlpStore: Our Activities

NUMERICAL APPLICATION ON REAL DATA
SENSIBLE FIGURES FOR STAKEHOLDER
After AlpStore: Our Achievements

T.E.A.M. Pilot action

1. New viable procedure for regional energy planning
2. Real life storage experimental application
3. Real life energy management application
4. New E.car fleet management model (supported by a demo APP)
After AlpStore: Our Recommendations

1. Be Effective on technology
2. Be in compliance with the Regulatory Framework
3. Be Sensible
4. Develop "IT" & Test "IT"
5. Show "IT"
6. "Talk" to People
7. GO ON !!!

25.02.2013 AlpStore Conference - Presentation Pilot Regions
